

You are an expert UI/UX website designer.

Create a responsive, one-page personal CV and portfolio website for me. I work as a software engineer.

Tech Stack

Use HTML5, Bootstrap 5, custom CSS, and vanilla JavaScript only. No other frameworks or backend.

Design

Modern, technology-inspired aesthetic with a bright, energetic color scheme. Clean typography, generous whitespace, and subtle hover/scroll animations.

Audience & Goal

Primary audience: recruiters, academic contacts, and industry professionals.

Primary calls-to-action: “Email Me” and “Message on WhatsApp” make both prominent (e.g., in the hero and a sticky/floating button).

Content Source

Use the attached CV and any supplied assets (photo, logos, etc.) as the source of truth for all content. Do not invent personal details, employers, dates, or achievements — if something is missing from the CV, insert a clearly marked placeholder (e.g., “[Add phone number]”) instead of making it up.

Requirements

- Semantic HTML5 (header, nav, main, section, footer)
- Descriptive alt text on all images
- Smooth scrolling to in-page anchors
- Responsive Bootstrap navbar (collapses to a hamburger menu on mobile)
- Fully responsive across mobile, tablet, and desktop
- Make it SEO, AEO, and GEO optimized and friendly
- Generate a favicon
- Include meaningful code comments to make the code easier to understand.
- Make sure not to add words and phrases like generated from CV

File Structure

```
/
├── index.html
├── README.md
├── css/style.css
└── js/script.js
```

└─ assets/

Deliverable

Complete, production-ready code across the files above, populated with the CV content (and placeholders where content is missing).

Add details in README.md
